

Lincoln (Providence)

Lincoln is a town in Providence County with 4,146 residents age 65 or older. Compared to state average rates, older residents fared better on some healthy aging indicators with lower rates of tobacco use disorder and cognitive difficulty. However, they had higher rates of high cholesterol. They are more likely to take the health promotion step of getting an annual dental exam. Community resources to support healthy aging include 88 primary care providers, a hospital, and 6 nursing homes within 5 miles; an Alzheimer's disease support group, a Memory Cafe, 20 home health agencies, an adult day health center, 7 hospice agencies, a senior center, a university or community college, and a public library.

POPULATION CHARACTERISTICS	Significantly different than STATE RATE	COMMUNITY ESTIMATE	STATE ESTIMATE
Total population all ages		21,644	1,056,611
Median age of females		43.5	41.6
Median age of males		41.1	38.1
Population 60 years or older as % of total population		24.5%	23.0%
Total population 60 years or older		5,310	243,523
Population 65 years or older as % of total population		19.2%	16.5%

Elder Index			
Single, homeowner without mortgage, good health	0.98	\$23,112.00	\$23,484.00
Single, renter, good health	0.99	\$25,344.00	\$25,560.00
Couple, homeowner without mortgage, good health	0.99	\$33,612.00	\$33,984.00
Couple, renter, good health	0.99	\$35,844.00	\$36,060.00

TECHNICAL NOTES

*See our technical report (online at <https://healthyagingdatareports.org>) for more information on data sources, measures, and methodology. For most indicators the community and state values are estimates derived from sample data. Thus, it is possible that some of the differences between state and community estimates may be due to chance associated with population sampling. We use the terms "Better" and "Worse" to highlight differences between community and state estimates that we are confident are not due to chance. "Better" is used where a higher/lower value has positive implications for the health of older residents. "Worse" is used where a higher/lower score has negative implications for the health of older people, and when the implication is unclear, we use an *. We balance two goals. First, we aim to report data at very local levels because we believe change is often locally driven. Second, we vowed to protect the privacy of the people providing the information reported. Thus, given the constraints of the data analyzed we used a hierarchical approach to reporting.

Data Sources:

- Population Characteristics: The U.S. Census Bureau (American Community Survey 2014-2018).
