

Little Compton (Newport)

Little Compton is a town in Newport County with 1,103 residents age 65 or older. Compared to state average rates, older residents fared better on some healthy aging indicators with lower rates of obesity, high cholesterol, tooth loss, anemia, chronic kidney disease, COPD, CHF, diabetes, hypertension, hypothyroidism, ischemic heart disease, peripheral vascular disease, anxiety disorder, vision difficulty, and self-care difficulty. However, they had a higher rate of atrial fibrillation. They are more likely to take the health promotion step of doing physical activity, meeting the CDC guidelines for aerobic physical activity, having an annual dental exam, and getting a shingles vaccine. They are less likely to get an annual physical exam and more likely to engage in excessive drinking and report stress about buying food. Community resources to support healthy aging include a primary care provider within 5 miles; 9 home health agencies, 8 hospice agencies, and a public library.

POPULATION CHARACTERISTICS	Significantly different than STATE RATE	COMMUNITY ESTIMATE	STATE ESTIMATE
Total population all ages		3,505	1,056,611
Median age of females		57.2	41.6
Median age of males		58.5	38.1
Population 60 years or older as % of total population		43.0%	23.0%
Total population 60 years or older		1,507	243,523
Population 65 years or older as % of total population		31.5%	16.5%
Total population 65 years or older		1,103	174,210
% 65-74 years	*	64.6%	55.6%

Couple, homeowner without mortgage, good health	1.05	\$35,700.00	\$33,984.00
Couple, renter, good health	1.05	\$37,764.00	\$36,060.00

TECHNICAL NOTES

*See our technical report (online at <https://healthyagingdatareports.org>) for more information on data sources, measures, and methodology. For most indicators the community and state values are estimates derived from sample data. Thus, it is possible that some of the differences between state and community estimates may be due to chance associated with population sampling. We use the terms "Better" and "Worse" to highlight differences between community and state estimates that we are confident are not due to chance. "Better" is used where a higher/lower value has positive implications for the health of older residents. "Worse" is used where a higher/lower score has negative implications for the health of older people, and when the implication is unclear, we use an *. We balance two goals. First, we aim to report data at very local levels because we believe change is often locally driven. Second, we vowed to protect the privacy of the people providing the information reported. Thus, given the constraints of the data analyzed we used a hierarchical approach to reporting.
