% 65+ getting Medicaid long term services and supports	*	*	3.0%	3.8%	4.0%
% 65+ hospice users			3.6%	3.7%	3.4%
% 65+ hospice users as % of decedents			47.3%	50.8%	50.7%

TECHNICAL NOTES

*For more information on data sources, measures, and methodology used in the 2025 Rhode Island Healthy Aging Data Report see our technical documentation at (healthyagingdatareports.org). For most indicators, the community and state values are estimates derived from sample data. Thus, it is possible that some of the differences between state and community estimates may be due to chance associated with population sampling. We use the terms “Better” and “Worse” to highlight differences between community and state estimates that we are confident are not due to chance. We balance two goals. First, we aim to report data at very local levels because we believe change is often locally driven. Second, we vowed to protect the privacy of the people providing the information reported. Thus, given the constraints of the data analyzed, we used a hierarchical approach to reporting.
