

North Providence (Providence)

North Providence is a town in Providence County with 6,569 residents aged 65 and older. Older residents have higher than state average rates on some healthy aging indicators such as anemia, chronic kidney disease, chronic obstructive pulmonary disease (COPD), congestive heart failure (CHF), diabetes, high cholesterol, heart attack, hypertension, ischemic heart disease, peripheral vascular disease, tobacco use disorder, depression, anxiety disorder, and schizophrenia. They are less likely to engage in health-promoting behaviors such as having an annual dental exam and engaging in physical activity. Additionally, they are more likely to smoke, and report being stressed about buying food. Community resources to support healthy aging include one public library, one senior center, one hospital, one community health center, two assisted living facilities, two skilled nursing facilities, and 44 primary care providers.

POPULATION CHARACTERISTICS	Significantly different than state rate	Community estimate	State estimate
Total population (all ages)		33,945	1,094,250

TECHNICAL NOTES

*For more information on data sources, measures, and methodology used in the 2025 Rhode Island Healthy Aging Data Report see our technical documentation at (healthyagingdatareports.org). For most indicators, the community and state values are estimates derived from sample data. Thus, it is possible that some of the differences between state and community estimates may be due to chance associated with population sampling. We use the terms “Better” and “Worse” to highlight differences between community and state estimates that we are confident are not due to chance. We balance two goals. First, we aim to report data at very local levels because we believe change is often locally driven. Second, we vowed to protect the privacy of the people providing the information reported. Thus, given the constraints of the data analyzed, we used a hierarchical approach to reporting.
