

Coventry (Kent)

Coventry is a town in Kent County with 6,361 residents aged 65 and older. Compared to state average rates, older residents fare worse on some healthy aging indicators with higher rates of anemia, chronic kidney disease, chronic obstructive pulmonary disease (COPD), congestive heart failure (CHF), diabetes, hypertension, ischemic heart disease, osteoarthritis/rheumatoid arthritis, high cholesterol, and tobacco use disorder. Older residents are likely to have dental insurance but less likely to take the health promotion step of receiving a shingles vaccine. Community resources to support healthy aging include one adult day health center, one senior center, one community health center, two public libraries, three assisted living facilities, three skilled nursing facilities, and four primary care providers.

POPULATION CHARACTERISTICS	Significantly different than state rate	Community estimate	State estimate

% 65+ hospice users		3.8%	3.4%
% 65+ hospice users as % of decedents		53.0%	50.7%

TECHNICAL NOTES

*For more information on data sources, measures, and methodology used in the 2025 Rhode Island Healthy Aging Data Report see our technical documentation at (healthyagingdatareports.org). For most indicators, the community and state values are estimates derived from sample data. Thus, it is possible that some of the differences between state and community estimates may be due to chance associated with population sampling. We use the terms “Better” and “Worse” to highlight differences between community and state estimates that we are confident are not due to chance. We balance two goals. First, we aim to report data at very local levels because we believe change is often locally driven. Second, we vowed to protect the privacy of the people providing the information reported. Thus, given the constraints of the data analyzed, we used a hierarchical approach to reporting.
