

Stonington is a town in New London County with 4.457 residents age 65 or older. Compared to state average rates, older residents fared better on some healthy aging indicators with lower rates of hip fracture, obesity, anemia, asthma, breast cancer, chronic kidney disease, diabetes, hypertension, hypothyroidism, peripheral vascular disease, pressure ulcers, bipolar disorder, schizophrenia or other psychotic disorder, and visual and mobility impairments. However, they had higher rates of COPD, liver disease, and hearing impairment. They are less likely to take the health promotion step of having regular mammograms. Community resources to support healthy aging include 14 primary care providers and 3 nursing homes within 5 miles, 10 home health agencies, 5 hospice agencies, 2 senior centers, and a public library.

POPULATION CHARACTERISTICS	Significantly different than STATE RATE	COMMUNITY ESTIMATE	STATE ESTIMATE
Total population all ages		18,436	3,581,504
Population 60 years or older as % of total population		32.7%	23.0%
Total population 60 years or older		6,020	823,529

TECHNICAL NOTES

*See our technical report (online at https://healthyagingdatareports.org) for more information on data sources, measures, geographic units, margins of error, and statistical methodology. For most indicators the community and state values are estimates derived from sample data. Thus, it is possible that some of the differences between state and community estimates may be due to chance associated with population sampling. We use the terms "Better" and "Worse" to highlight differences between community and state estimates that we are confident are not due to chance. "Better" is used where a higher/lower value has positive implications for the health of older residents. "Worse" is used where a higher/lower score has negative implications for the health of older people, and when the implication is unclear, we use an *.

We balance two goals. First, we aim to report data at very local levels because we believe change is often locally driven. Second, we vowed to protect the privacy of the people providing the information reported. Thus, given the constraints of the data analyzed we used a hierarchical approach to reporting.
