

Weston (Fairfield)

Weston is a town in Fairfield County with 1,399 residents age 65 or older. Compared to state average rates, older residents fared better on some healthy aging indicators with lower rates of obesity, high cholesterol, tooth loss, Alzheimer's disease, anemia, chronic kidney disease, COPD, CHF, diabetes, epilepsy, glaucoma, heart attack, hypertension, ischemic heart disease, liver disease, osteoarthritis and rheumatoid arthritis, peripheral vascular disease, pressure ulcers, opioid and tobacco use disorders, depression, anxiety and bipolar disorders, schizophrenia, PTSD, and hearing and visual impairment. However, they had higher rates of excessive drinking and traumatic brain injury. They are more likely to be nonsmokers and take the health promotion step of getting the recommended hours of sleep, engaging in physical activity, and meeting the CDC guidelines for muscle strengthening activity. However, they are less likely to get an annual physical exam or have a regular doctor. Community resources to support healthy aging include 74 primary care providers within 5 miles, 16 home health agencies, 10 hospice agencies, a senior center, and a public library.

POPULATION CHARACTERISTICS	Significantly different than STATE RATE	COMMUNITY ESTIMATE	STATE ESTIMATE
Total population all ages		10,288	3,581,504

Couple, renter, good health	1.07	\$42,588.00	\$39,660.00

TECHNICAL NOTES

*See our technical report (online at <https://healthyagingdatareports.org>) for more information on data sources, measures, geographic units, margins of error, and statistical methodology. For most indicators the community and state values are estimates derived from sample data. Thus, it is possible that some of the differences between state and community estimates may be due to chance associated with population sampling. We use the terms "Better" and "Worse" to highlight differences between community and state estimates that we are confident are not due to chance. "Better" is used where a higher/lower value has positive implications for the health of older residents. "Worse" is used where a higher/lower score has negative implications for the health of older people, and when the implication is unclear, we use an *.

We balance two goals. First, we aim to report data at very local levels because we believe change is often locally driven. Second, we vowed to protect the privacy of the people providing the information reported. Thus, given the constraints of the data analyzed we used a hierarchical approach to reporting.
