

## Hartford Area3 (Hartford)

Hartford Area 3 is a Southern neighborhood of Hartford in Hartford County with 6,796 residents age 65 or older. Compared to state average rates, older residents had lower rates of atrial fibrillation, benign prostatic hyperplasia, cataract, fibromyalgia, hypothyroidism, lung cancer, osteoarthritis, prostate cancer, and hearing impairment. However, they had higher rates of obesity, tooth loss, Alzheimer's disease, anemia, asthma, chronic kidney disease, COPD, CHF, diabetes, epilepsy, heart attack, hypertension, ischemic heart disease, liver disease, peripheral vascular disease, pressure ulcers, depression, opioid/substance/tobacco use disorders; anxiety/bipolar/personality disorders; PTSD, schizophrenia, and visual/mobility impairments. They are more likely to be current smokers and less likely to meet the CDC guidelines for aerobic physical activity, get flu/shingles vaccines, and have an annual dental exam. They are also more likely to be stressed about buying food and not have a regular doctor. Community resources include 123 primary care providers, 3 nursing homes and a hospital within 5 miles; 9 hospice agencies, 3 caregiver support groups, 2 senior centers, 2 community health centers, 2 home health agencies, an assisted living site, an adult day health center, 3 public libraries, and a university or community college.

<b>POPULATION CHARACTERISTICS</b>	<b>Significantly different than STATE RATE</b>	<b>COMMUNITY ESTIMATE</b>	<b>STATE ESTIMATE</b>
Total population all ages		66,510	3,581,504
Population 60 years or older as % of total population		14.7%	23.0%
Total population 60 years or older		9,789	823,529
Population 65 years or older as % of total population		10.2%	16.4%
Total population 65 years or older		6,796	587,580

Couple, homeowner without mortgage, good health	0.96	\$36,444.00	\$37,920.00
Couple, renter, good health	0.95	\$37,812.00	\$39,660.00

#### TECHNICAL NOTES

\*See our technical report (online at <https://healthyagingdatareports.org>) for more information on data sources, measures, geographic units, margins of error, and statistical methodology. For most indicators the community and state values are estimates derived from sample data. Thus, it is possible that some of the differences between state and community estimates may be due to chance associated with population sampling. We use the terms "Better" and "Worse" to highlight differences between community and state estimates that we are confident are not due to chance. "Better" is used where a higher/lower value has positive implications for the health of older residents. "Worse" is used where a higher/lower score has negative implications for the health of older people, and when the implication is unclear, we use an \*.

We balance two goals. First, we aim to report data at very local levels because we believe change is often locally driven. Second, we vowed to protect the privacy of the people providing the information reported. Thus, given the constraints of the data analyzed we used a hierarchical approach to reporting.
