

Franklin (New London)

Franklin is a town in New London County with 357 residents age 65 or older. Compared to state average rates, older residents fared better on some healthy aging indicators with lower rates of Alzheimer's disease or related dementias, glaucoma, pressure ulcers, prostate cancer, traumatic brain injury, depression, bipolar and personality disorders, schizophrenia and other psychotic disorders, and visual and mobility impairments. However, they had higher rates of obesity, high cholesterol, tooth loss, COPD, hypothyroidism, and tobacco use disorder. They are more likely to take the health promotion steps of having an annual physical exam and always wearing a seatbelt, but are less likely to do any physical activity within the last month, meet the CDC guidelines for muscle-strengthening and aerobic physical activities, get a flu shot in the last year, and have an annual dental exam. Community resources to support healthy aging include 7 home health agencies and a public library.

POPULATION CHARACTERISTICS	Significantly different than STATE RATE	COMMUNITY ESTIMATE	STATE ESTIMATE
Total population all ages		1,842	3,581,504
Population 60 years or older as % of total population		28.6%	23.0%

Couple, renter, good health	0.92	\$36,504.00	\$39,660.00

TECHNICAL NOTES

*See our technical report (online at <https://healthyagingdatareports.org>) for more information on data sources, measures, geographic units, margins of error, and statistical methodology. For most indicators the community and state values are estimates derived from sample data. Thus, it is possible that some of the differences between state and community estimates may be due to chance associated with population sampling. We use the terms "Better" and "Worse" to highlight differences between community and state estimates that we are confident are not due to chance. "Better" is used where a higher/lower value has positive implications for the health of older residents. "Worse" is used where a higher/lower score has negative implications for the health of older people, and when the implication is unclear, we use an *.

We balance two goals. First, we aim to report data at very local levels because we believe change is often locally driven. Second, we vowed to protect the privacy of the people providing the information reported. Thus, given the constraints of the data analyzed we used a hierarchical approach to reporting.
