

## Griswold (New London)

Griswold is a town in New London County with 1,782 residents age 65 or older. Compared to state average rates, older residents fared better on some healthy aging indicators with lower rates of Alzheimer's disease or related dementias, cataract, glaucoma, traumatic brain injury, PTSD, schizophrenia and other psychotic disorders, personality disorder, and hearing impairment. However, they had higher rates of obesity, high cholesterol, tooth loss, asthma, COPD, diabetes, fibromyalgia, chronic pain and fatigue, heart attack, hypertension, hypothyroidism, ischemic heart disease, osteoarthritis or rheumatoid arthritis, peripheral vascular disease, tobacco use disorder, and anxiety disorder. They are more likely to take the health promotion steps of having an annual physical exam and always wearing a seatbelt, but are less likely to have an annual dental exam, do any physical activity within the last month, meet the CDC guidelines for muscle-strengthening and aerobic physical activities, or get a flu shot. Community resources to support healthy aging include 4 primary care providers within 5 miles, 11 home health agencies, a community health center, a caregiver support group, a senior center, a university or community college, and a public library.

<b>POPULATION CHARACTERISTICS</b>	<b>Significantly different than STATE RATE</b>	<b>COMMUNITY ESTIMATE</b>	<b>STATE ESTIMATE</b>
Total population all ages		11,693	3,581,504
Population 60 years or older as % of total population		21.6%	23.0%

Couple, renter, good health	0.92	\$36,504.00	\$39,660.00

#### TECHNICAL NOTES

\*See our technical report (online at <https://healthyagingdatareports.org>) for more information on data sources, measures, geographic units, margins of error, and statistical methodology. For most indicators the community and state values are estimates derived from sample data. Thus, it is possible that some of the differences between state and community estimates may be due to chance associated with population sampling. We use the terms "Better" and "Worse" to highlight differences between community and state estimates that we are confident are not due to chance. "Better" is used where a higher/lower value has positive implications for the health of older residents. "Worse" is used where a higher/lower score has negative implications for the health of older people, and when the implication is unclear, we use an \*.

We balance two goals. First, we aim to report data at very local levels because we believe change is often locally driven. Second, we vowed to protect the privacy of the people providing the information reported. Thus, given the constraints of the data analyzed we used a hierarchical approach to reporting.
