

Milford (New Haven)

Milford is a city in New Haven County with 9,990 residents age 65 or older. Compared to state average rates, older residents fared better on some healthy aging indicators with lower rates of Alzheimer's disease or related dementias, cataract, epilepsy, osteoarthritis or rheumatoid arthritis, osteoporosis, depression, PTSD, personality disorder, and hearing impairment. However, they had higher rates of anemia, benign prostatic hyperplasia, chronic kidney disease, COPD, diabetes, hypertension, and hypothyroidism. They are more likely to take the health promotion step of having regular mammograms but less likely to get a shingles vaccine. Community resources to support healthy aging include 94 primary care providers, a hospital, and 5 nursing homes within 5 miles; a caregiver support group, 36 home health agencies, 12 hospice agencies, a senior center, a public library, and 2 assisted living sites.

POPULATION CHARACTERISTICS	Significantly different than STATE RATE	COMMUNITY ESTIMATE	STATE ESTIMATE
Total population all ages		54,047	3,581,504

Couple, homeowner without mortgage, good health	1.02	\$38,736.00	\$37,920.00
Couple, renter, good health	1.03	\$40,992.00	\$39,660.00

TECHNICAL NOTES

*See our technical report (online at <https://healthyagingdatareports.org>) for more information on data sources, measures, geographic units, margins of error, and statistical methodology. For most indicators the community and state values are estimates derived from sample data. Thus, it is possible that some of the differences between state and community estimates may be due to chance associated with population sampling. We use the terms "Better" and "Worse" to highlight differences between community and state estimates that we are confident are not due to chance. "Better" is used where a higher/lower value has positive implications for the health of older residents. "Worse" is used where a higher/lower score has negative implications for the health of older people, and when the implication is unclear, we use an *.

We balance two goals. First, we aim to report data at very local levels because we believe change is often locally driven. Second, we vowed to protect the privacy of the people providing the information reported. Thus, given the constraints of the data analyzed we used a hierarchical approach to reporting.
