

Newington (Hartford)

Newington is a town in Hartford County with 6,465 residents age 65 or older. Compared to state average rates, older residents fared better on some healthy aging indicators with lower rates of COPD, fibromyalgia/chronic pain/fatigue, hypothyroidism, migraine, peripheral vascular disease, stroke, opioid use disorder, and substance use disorder. However, they had higher rates of high cholesterol, cataract, chronic kidney disease, CHF, hypertension, ischemic heart disease, prostate cancer, depression, and visual impairment. They were less likely to take the health promotion step of getting colorectal cancer screening. Community resources to support healthy aging include 164 primary care providers and 8 nursing homes within 5 miles, 33 home health agencies, 11 hospice agencies, 2 caregiver support groups, a senior center, a public library, and an assisted living site.

POPULATION CHARACTERISTICS	Significantly different than STATE RATE	COMMUNITY ESTIMATE	STATE ESTIMATE
Total population all ages		30,323	3,581,504

Couple, renter, good health	0.95	\$37,812.00	\$39,660.00

TECHNICAL NOTES

*See our technical report (online at <https://healthyagingdatareports.org>) for more information on data sources, measures, geographic units, margins of error, and statistical methodology. For most indicators the community and state values are estimates derived from sample data. Thus, it is possible that some of the differences between state and community estimates may be due to chance associated with population sampling. We use the terms "Better" and "Worse" to highlight differences between community and state estimates that we are confident are not due to chance. "Better" is used where a higher/lower value has positive implications for the health of older residents. "Worse" is used where a higher/lower score has negative implications for the health of older people, and when the implication is unclear, we use an *.

We balance two goals. First, we aim to report data at very local levels because we believe change is often locally driven. Second, we vowed to protect the privacy of the people providing the information reported. Thus, given the constraints of the data analyzed we used a hierarchical approach to reporting.
