

Plaistow (Rockingham)

Plaistow is an urban town in Rockingham County and home to part of Hunt Road Town Forest. There are 1,014 residents age 65 or older. Compared to state average rates, older residents fared better on some healthy aging indicators with lower rates of hip fracture, depression, post-traumatic stress disorder, schizophrenia and other psychotic disorders, hypothyroidism, and cataracts. However, they had higher rates of obesity, chronic obstructive pulmonary disease, peripheral vascular disease, anemia, osteoarthritis/rheumatoid arthritis, and traumatic brain injury. They are more likely to take the health promotion step of getting a mammogram within last 2 years. Community resources to support healthy aging include 20 primary care providers and 4 nursing homes within 5 miles, 11 home health agencies, a senior center, a public library, a YMCA, and access to broadband.

POPULATION CHARACTERISTICS	BETTER / WORSE STATE RATE¹	COMMUNITY ESTIMATE	STATE ESTIMATE
Total population all ages		7,620	1,327,503
Population 60 years or older as % of total population		21.5%	22.7%
Total population 60 years or older		1,642	301,630
Population 65 years or older as % of total population		13.3%	15.8%
Total population 65 years or older		1,014	210,385
% 65-74 years		44.8%	58.5%
% 75-84 years		45.9%	28.6%
% 85 years or older		9.4%	12.9%
Gender (65+ population)			
% female		54.4%	54.7%
Race/Ethnicity (65+ population)			
% White		99.0%	97.7%
% African American		1.0%	0.5%

% 60+ have mortgage on home		45.2%	35.3%
% 65+ households spend >35% of income on housing (renter)		3.7%	8.7%
% 65+ households spend >35% of income on housing (owner)		23.2%	21.2%
COST OF LIVING	\$ COUNTY ESTIMATE	\$ STATE ESTIMATE	RATIO (COUNTY/STATE)
Elder Economic Security Standard Index			
Single, homeowner without mortgage, good health	\$25,536	\$25,284	1.01
Single, renter, good health	\$26,712	\$26,400	1.01
Couple, homeowner without mortgage, good health	\$37,092	\$37,128	1.00
Couple, renter, good health	\$38,268	\$38,244	1.00

TECHNICAL NOTES

*See our technical report (online at <https://healthyagingdatareports.org/>) for more information on data sources, measures, methodology, and margin of errors. For most indicators the reported community and state values are both estimates derived from sample data. Thus, it is possible that some of the differences between state and community estimates may be due to chance associated with population sampling. We use the terms “better” and “worse” to highlight differences between community and state estimates that we are confident are not due to chance. “Better” is used where a higher/lower value has positive implications for the health of older residents. “Worse” is used where a higher/lower score has negative implications for the health of older people, and when the implication is unclear, we use an *. We balance two goals. First, we aim to report data at very local levels because we believe change is often locally driven. Second, we vowed to protect the privacy of the people providing the information reported. Thus, given the constraints of the data analyzed we used a hierarchical approach to reporting. When possible we report estimates for 244 geographic units (i.e., every NH city/town and 5 Manchester neighborhoods, 4 Nashua neighborhoods). For example, the population characteristics were reported for all 244 units. For other data (i.e., highly prevalent chronic disease, health services utilization) we could report for 154 geographic units. For less prevalent conditions we report for 69 geographic units. For the BRFSS data we report for 28 geographic units, and for the lowest prevalence conditions (e.g., HIV) we report for 4 geographic units. The same estimate is reported for all cities/towns within aggregated geographic areas. Maps of the different geographic groupings and the rationale behind the groupings are in the Technical Report.
