## Warren (Grafton)

Warren is a rural town in Grafton County and home to Moose Hillock Camping Resort. There are 161 residents age 65 or older. Compared to state average rates, older residents fared had higher rates of tobacco use disorders, Alzheimer's disease or related dementias, chronic obstructive pulmonary disease, congestive heart failure, peripheral vascular disease, anemia, cataracts, and pressure ulcers. Community resources to support healthy aging include 3 home health agencies, a community health center, a senior center, a senior center, and a public library.

POPULATION CHARACTERISTICS	BETTER / WORSE STATE RATE <sup>1</sup>	COMMUNITY ESTIMATE	STATE ESTIMATE
Total population all ages		869	1,327,503

## TECHNICAL NOTES

\*See our technical report (online at https://healthyagingdatareports.org/) for more information on data sources, measures, methodology, and margin of errors. For most indicators the reported community and state values are both estimates derived from sample data. Thus, it is possible that some of the differences between state and community estimates may be due to chance associated with population sampling. We use the terms "better" and "worse" to highlight differences between community and state estimates that we are confident are <u>not</u> due to chance. "Better" is used where a higher/lower value has positive implications for the health of older residents. "Worse" is used where a higher/lower score has negative implications for the health of older residents. "Worse" is used where a higher/lower score has negative implications for the health of older residents. "Worse" is used where a higher/lower score has negative implications for the health of older residents. "Worse" is used where a higher/lower score has negative implications for the health of older residents. "Worse" is used where a higher/lower score has negative implications for the health of older residents. "Worse" is used where a higher/lower score has negative implications for the health of older residents. "Worse" is used where a higher/lower score has negative implications for the health of older residents. "Worse" is used where a higher/lower score has negative implications for the health of older residents. "Worse" is used where a higher/lower score has negative implications to report the health of older people, and when the implication is unclear, we use an \*. We balance two goals. First, we aim to report data at very local levels because we believe change is often locally driven. Second, we vowed to protect the privacy of the people providing the information reported. Thus, given the constraints of the data analyzed we used a hierarchical approach to reporting. When possible we report estimates for 244 geographic units (i.e., every NH city/town an

<u>Healthy Aging Data Report Team</u>. Many people contributed to this research. The 2018 research team: Beth Dugan PhD, Frank Porell PhD, Nina Silverstein PhD, Chae Man Lee PhD, ShuangShuang Wang PhD, Bon Kim, Natalie Pitheckoff, Haowei Wang, Sae Hwang Han, Richard Chunga, & Shiva Prisad from the Gerontology Institute in the McCormack Graduate School of Policy and Global Studies at the University of Massachusetts Boston. The Tufts Health Plan Foundation supported the research and provided important guidance. Our Advisory Committees helped to make the Data Report best address the needs of New Hampshire. We thank JSI for their continued partnership. Questions? Beth.dugan@umb.edu Update: 05/2019
