

## Plainville (Hartford)

Plainville is a town in Hartford County with 3,155 residents age 65 or older. Compared to state average rates, older residents fared better on some healthy aging indicators with lower rates of glaucoma, migraine and other chronic headaches, osteoporosis, and peripheral vascular disease. However, they had higher rates of being injured in a fall within the last year, asthma, cataract, COPD, CHF, hypertension, ischemic heart disease, tobacco use disorder, and depression. They are more likely to take the health promotion steps of having a regular doctor and not drinking excessively. Community resources to support healthy aging include 166 primary care providers, 7 nursing homes, and a hospital within 5 miles; 29 home health agencies, 12 hospice agencies, 3 caregiver support groups, an adult day health center, a public library, and a senior center.

<b>POPULATION CHARACTERISTICS</b>	<b>Significantly different than STATE RATE</b>	<b>COMMUNITY ESTIMATE</b>	<b>STATE ESTIMATE</b>
Total population all ages		17,720	3,581,504
Population 60 years or older as % of total population		26.5%	23.0%
Total population 60 years or older		4,704	823,529
Population 65 years or older as % of total population		17.8%	16.4%
Total population 65 years or older		3,155	587,580
% 65-74 years	*	65.2%	55.7%

Couple, homeowner without mortgage, good health	0.96	\$36,444.00	\$37,920.00
Couple, renter, good health	0.95	\$37,812.00	\$39,660.00

#### TECHNICAL NOTES

\*See our technical report (online at <https://healthyagingdatareports.org>) for more information on data sources, measures, geographic units, margins of error, and statistical methodology. For most indicators the community and state values are estimates derived from sample data. Thus, it is possible that some of the differences between state and community estimates may be due to chance associated with population sampling. We use the terms "Better" and "Worse" to highlight differences between community and state estimates that we are confident are not due to chance. "Better" is used where a higher/lower value has positive implications for the health of older residents. "Worse" is used where a higher/lower score has negative implications for the health of older people, and when the implication is unclear, we use an \*.

We balance two goals. First, we aim to report data at very local levels because we believe change is often locally driven. Second, we vowed to protect the privacy of the people providing the information reported. Thus, given the constraints of the data analyzed we used a hierarchical approach to reporting.
