

Redding (Fairfield)

Redding is a town in Fairfield County with 1,913 residents age 65 or older. Compared to state average rates, older residents fared better on some healthy aging indicators with lower rates of obesity, tooth loss, chronic kidney disease, COPD, CHF, diabetes, heart attack, hypertension, opioid use disorder, tobacco use disorder, PTSD, schizophrenia and psychotic disorders, anxiety, bipolar, personality disorder, and mobility impairment. However, they had higher rates of hip fracture, benign prostatic hyperplasia, breast cancer, osteoporosis, and prostate cancer. They are more likely to take the health promotion steps of meeting the CDC guidelines for aerobic physical activity and not smoking. Community resources to support healthy aging include a nursing home within 5 miles, 16 home health agencies, 5 hospice agencies, an assisted living site, a senior center, and a public library.

POPULATION CHARACTERISTICS	Significantly different than STATE RATE	COMMUNITY ESTIMATE	STATE ESTIMATE
Total population all ages		9,209	3,581,504
Population 60 years or older as % of total population		27.9%	23.0%

Elder Index			
Single, homeowner without mortgage, good health	1.11	\$29,664.00	\$26,796.00
Single, renter, good health	1.11	\$31,560.00	\$28,536.00
Couple, homeowner without mortgage, good health	1.07	\$40,692.00	\$37,920.00
Couple, renter, good health	1.07	\$42,588.00	\$39,660.00

TECHNICAL NOTES

*See our technical report (online at <https://healthyagingdatareports.org>) for more information on data sources, measures, geographic units, margins of error, and statistical methodology. For most indicators the community and state values are estimates derived from sample data. Thus, it is possible that some of the differences between state and community estimates may be due to chance associated with population sampling. We use the terms "Better" and "Worse" to highlight differences between community and state estimates that we are confident are not due to chance. "Better" is used where a higher/lower value has positive implications for the health of older residents. "Worse" is used where a higher/lower score has negative implications for the health of older people, and when the implication is unclear, we use an *.

We balance two goals. First, we aim to report data at very local levels because we believe change is often locally driven. Second, we vowed to protect the privacy of the people providing the information reported. Thus, given the constraints of the data analyzed we used a hierarchical approach to reporting.
