

## Westbrook (Middlesex)

Westbrook is a town in Middlesex County with 1,732 residents age 65 or older. Compared to state average rates, older residents fared better on some healthy aging indicators with lower rates of tooth loss, benign prostatic hyperplasia, CHF, diabetes, and stroke. However, they had higher rates of high cholesterol, cataract, liver disease, and tobacco use disorder. They are more likely to take the health promotion steps of engaging in physical activity, meeting the CDC guidelines for aerobic physical activity, getting a pneumonia and shingles vaccine, getting a colorectal cancer screening, and meeting the CDC preventive health screening goals. They are also more likely to report having a regular doctor. Community resources to support healthy aging include 38 primary care providers and 3 nursing homes within 5 miles; 16 home health agencies, a senior center, a public library, and a YMCA.

<b>POPULATION CHARACTERISTICS</b>	<b>Significantly different than STATE RATE</b>	<b>COMMUNITY ESTIMATE</b>	<b>STATE ESTIMATE</b>
Total population all ages		6,904	3,581,504
Population 60 years or older as % of total population		34.3%	23.0%

Couple, renter, good health	0.99	\$39,096.00	\$39,660.00

#### TECHNICAL NOTES

\*See our technical report (online at <https://healthyagingdatareports.org>) for more information on data sources, measures, geographic units, margins of error, and statistical methodology. For most indicators the community and state values are estimates derived from sample data. Thus, it is possible that some of the differences between state and community estimates may be due to chance associated with population sampling. We use the terms "Better" and "Worse" to highlight differences between community and state estimates that we are confident are not due to chance. "Better" is used where a higher/lower value has positive implications for the health of older residents. "Worse" is used where a higher/lower score has negative implications for the health of older people, and when the implication is unclear, we use an \*.

We balance two goals. First, we aim to report data at very local levels because we believe change is often locally driven. Second, we vowed to protect the privacy of the people providing the information reported. Thus, given the constraints of the data analyzed we used a hierarchical approach to reporting.
