

Danbury (Fairfield)

Danbury is a city in Fairfield County with 11,498 residents age 65 or older. Compared to state average rates, older residents fared better on some healthy aging indicators with lower rates of Alzheimer's disease or related dementias, anemia, atrial fibrillation, congestive heart failure, glaucoma, hypothyroidism, substance use disorder, and hearing impairment. However, they had higher rates of obesity, high cholesterol, asthma, benign prostatic hyperplasia, chronic kidney disease, diabetes, fibromyalgia/chronic pain/fatigue, ischemic heart disease, liver disease, osteoporosis, peripheral vascular disease, pressure ulcers, traumatic brain injury, opioid use disorder, and bipolar and personality disorders. They are more likely to be nonsmokers. Community resources to support healthy aging include 170 primary care providers, a hospital, and 6 nursing homes within 5 miles; 14 home health agencies, 4 community health centers, 9 hospice agencies, 2 assisted living sites, 2 public libraries, a senior center, an adult day health center, and a university or community college.

POPULATION CHARACTERISTICS	Significantly different than STATE RATE	COMMUNITY ESTIMATE	STATE ESTIMATE
Total population all ages		84,479	3,581,504
Population 60 years or older as % of total population		18.9%	23.0%
Total population 60 years or older		15,948	823,529

Couple, renter, good health	1.07	\$42,588.00	\$39,660.00

TECHNICAL NOTES

*See our technical report (online at <https://healthyagingdatareports.org>) for more information on data sources, measures, geographic units, margins of error, and statistical methodology. For most indicators the community and state values are estimates derived from sample data. Thus, it is possible that some of the differences between state and community estimates may be due to chance associated with population sampling. We use the terms "Better" and "Worse" to highlight differences between community and state estimates that we are confident are not due to chance. "Better" is used where a higher/lower value has positive implications for the health of older residents. "Worse" is used where a higher/lower score has negative implications for the health of older people, and when the implication is unclear, we use an *.

We balance two goals. First, we aim to report data at very local levels because we believe change is often locally driven. Second, we vowed to protect the privacy of the people providing the information reported. Thus, given the constraints of the data analyzed we used a hierarchical approach to reporting.
