

Harwinton (Litchfield)

Harwinton is a town in Litchfield County with 1,154 residents age 65 or older. Compared to state average rates, older residents fared better on some healthy aging indicators with lower rates of obesity, high cholesterol, tooth loss, Alzheimer's disease or related dementias, anemia, asthma, chronic kidney disease, congestive heart failure, diabetes, epilepsy, glaucoma, hypertension, ischemic heart disease, pressure ulcers, peripheral vascular disease, osteoporosis, opioid use disorder, substance use disorder, depression, anxiety disorder, bipolar disorder, schizophrenia and other psychotic disorders, personality disorder, and mobility impairment. However, they had higher rates of cataract. They are more likely to take the health promotion steps of doing any physical activity within the last month, getting the shingles vaccine, getting annual dental exams, and always driving wearing a seatbelt. Community resources to support healthy aging include 17 primary care providers and 2 nursing homes within 5 miles, 11 home health agencies, 9 hospice agencies, a senior center, and a public library.

POPULATION CHARACTERISTICS	Significantly different than STATE RATE	COMMUNITY ESTIMATE	STATE ESTIMATE
Total population all ages		5,469	3,581,504
Population 60 years or older as % of total population		28.8%	23.0%
Total population 60 years or older		1,575	823,529

Couple, renter, good health	0.95	\$37,860.00	\$39,660.00

TECHNICAL NOTES

*See our technical report (online at <https://healthyagingdatareports.org>) for more information on data sources, measures, geographic units, margins of error, and statistical methodology. For most indicators the community and state values are estimates derived from sample data. Thus, it is possible that some of the differences between state and community estimates may be due to chance associated with population sampling. We use the terms "Better" and "Worse" to highlight differences between community and state estimates that we are confident are not due to chance. "Better" is used where a higher/lower value has positive implications for the health of older residents. "Worse" is used where a higher/lower score has negative implications for the health of older people, and when the implication is unclear, we use an *.

We balance two goals. First, we aim to report data at very local levels because we believe change is often locally driven. Second, we vowed to protect the privacy of the people providing the information reported. Thus, given the constraints of the data analyzed we used a hierarchical approach to reporting.
