

## New London (New London)

New London is a city in New London County with 2,949 residents age 65 or older. Compared to state average rates, older residents fared better on some healthy aging indicators with lower rates of leukemias and lymphomas. However, they had higher rates of obesity, benign prostatic hyperplasia, Alzheimer's disease or related dementias, anemia, asthma, chronic kidney disease, COPD, CHF, diabetes, epilepsy, fibromyalgia/chronic pain/fatigue, heart attack, hypertension, ischemic heart disease, liver disease, osteoporosis, peripheral vascular disease, pressure ulcers, stroke, traumatic brain injury, opioid use disorder, substance and tobacco use disorders, depression, anxiety, bipolar and personality disorders; PTSD, schizophrenia, hearing, visual, and mobility impairments. They are less likely to take the health promotion step of having a mammogram within the last 2 years. Community resources to support healthy aging include 77 primary care providers, a hospital, and 7 nursing homes within 5 miles; 12 home health agencies, 6 hospice agencies, 2 community health centers, 3 universities or community colleges, a caregiver support group, a senior center, and a public library.

POPULATION CHARACTERISTICS	Significantly different than STATE RATE	COMMUNITY ESTIMATE	STATE ESTIMATE
Total population all ages		27,032	3,581,504
Population 60 years or older as % of total population		16.6%	23.0%
Total population 60 years or older		4,496	823,529
Population 65 years or older as % of total population		10.9%	16.4%
Total population 65 years or older		2,949	587,580
% 65-74 years		61.2%	55.7%
% 75-84 years		24.0%	29.1%
% 85 years or older		14.8%	15.2%
% 65+ population who are female		57.4%	56.8%
% 85+ population who are female		60.2%	66.6%

Couple, homeowner without mortgage, good health	0.92	\$34,968.00	\$37,920.00
Couple, renter, good health	0.92	\$36,504.00	\$39,660.00

#### TECHNICAL NOTES

\*See our technical report (online at <https://healthyagingdatareports.org>) for more information on data sources, measures, geographic units, margins of error, and statistical methodology. For most indicators the community and state values are estimates derived from sample data. Thus, it is possible that some of the differences between state and community estimates may be due to chance associated with population sampling. We use the terms "Better" and "Worse" to highlight differences between community and state estimates that we are confident are not due to chance. "Better" is used where a higher/lower value has positive implications for the health of older residents. "Worse" is used where a higher/lower score has negative implications for the health of older people, and when the implication is unclear, we use an \*.

We balance two goals. First, we aim to report data at very local levels because we believe change is often locally driven. Second, we vowed to protect the privacy of the people providing the information reported. Thus, given the constraints of the data analyzed we used a hierarchical approach to reporting.
