

A3 New Haven (New Haven)

New Haven Area 3 is an Eastern neighborhood of New Haven in New Haven County with 9,239 residents aged 65 and older. Compared to state average rates, older residents have lower rates of cataract and prostate cancer. However, they have higher rates of Alzheimer's disease, anemia, chronic kidney disease, COPD, congestive heart failure (CHF), diabetes, fibromyalgia, high cholesterol, hypertension, ischemic heart disease, liver disease, peripheral vascular disease, pressure ulcer, substance and tobacco use disorders, depression, anxiety disorder, PTSD, and schizophrenia. Older residents in New Haven County varied in obtaining preventive health screenings: residents 18 and older got annual physical exams (76.1%) and annual dental exams (70.4%), while 52% of men and 37.5% of women 65 and older completed all CDC recommended vaccinations and cancer screenings. Community resources to support healthy aging include three assisted living facilities, 13 primary care providers, one home health agency, nine community health centers, one adult day health center, one senior center, and one public library.

POPULATION CHARACTERISTICS	Significantly different than state rate	Community estimate	State estimate
Total population (all ages)		47,079	3,611,317
Population 60 years or older as % of total population		25.8%	24.5%
Total population 60 years and older		12,150	885,046
Population 65 years or older as % of total population		19.6%	17.4%
Total population 65 years and older		9,239	629,108
% 65-74 years		54.0%	57.6%
% 75-84 years		32.6%	28.4%
% 85 years or older		13.4%	14.0%

% 65+ hospice users		2.4%	2.6%
% 65+ hospice users as % of decedents		37.3%	42.4%

NOTES

TECHNICAL NOTES

*For more information on data sources, measures, and methodology used in the 2025 Connecticut Healthy Aging Data Report see our technical documentation at (healthyagingdatareports.org). For most indicators, the community and state values are estimates derived from sample data. Thus, it is possible that some of the differences between state and community estimates may be due to chance associated with population sampling. We use the terms “Better” and “Worse” to highlight differences between community and state estimates that we are confident are not due to chance. We balance two goals. First, we aim to report data at very local levels because we believe change is often locally driven. Second, we vowed to protect the privacy of the people providing the information reported. Thus, given the constraints of the data analyzed, we used a hierarchical approach to reporting.
