

Mansfield (Tolland)

Mansfield is a town in Tolland County with 2,972 residents aged 65 and older. Compared to state average rates, older residents fare better on some healthy aging indicators with lower rates of anemia, benign prostatic hyperplasia, diabetes, high cholesterol, and peripheral vascular disease. However, they have higher rates of cataract and depression. Older residents in Tolland County varied in obtaining preventive health screenings: residents 18 and older got annual physical exams (77.3%) and annual dental exams (72.6%), while 50.2% of men and 45.8% of women 65 and older completed all CDC recommended vaccinations and cancer screenings. Community resources to support healthy aging include 118 primary care providers, one hospital, one skilled nursing facility, one senior center, two public universities or community colleges, three public libraries, and one Osher Lifelong Learning Institute (OLLI).

POPULATION CHARACTERISTICS	Significantly different than state rate	Community estimate	State estimate
Total population (all ages)		28,378	3,611,317
Population 60 years or older as % of total population		13.7%	24.5%
Total population 60 years and older		3,891	885,046
Population 65 years or older as % of total population		10.5%	17.4%
Total population 65 years and older		2,972	629,108
% 65-74 years		61.0%	57.6%
% 75-84 years		24.3%	28.4%
% 85 years or older		14.7%	14.0%
% 65+ population who are female		58.8%	55.7%
% 85+ population who are female		80.3%	66.0%
Race and ethnicity of the population 65+			
% White	*	92.6%	84.8%
% African American	*	1.7%	6.7%
% Asian		3.5%	2.6%

CAREGIVING			
# of Alzheimer's support groups		0	29
% grandparents raising grandchildren		0.30%	0.73%

TECHNICAL NOTES

*For more information on data sources, measures, and methodology used in the 2025 Connecticut Healthy Aging Data Report see our technical documentation at (healthyagingdatareports.org). For most indicators, the community and state values are estimates derived from sample data. Thus, it is possible that some of the differences between state and community estimates may be due to chance associated with population sampling. We use the terms “Better” and “Worse” to highlight differences between community and state estimates that we are confident are not due to chance. We balance two goals. First, we aim to report data at very local levels because we believe change is often locally driven. Second, we vowed to protect the privacy of the people providing the information reported. Thus, given the constraints of the data analyzed, we used a hierarchical approach to reporting.
