

## New Haven (New Haven)

New Haven is a city in New Haven County with 14,630 residents aged 65+. Compared to state average rates, older residents have lower rates of atrial fibrillation, benign prostatic hyperplasia, high cholesterol, cataract, osteoporosis, and prostate cancer. However, they have higher rates of Alzheimer’s disease, anemia, asthma, chronic kidney disease, COPD, CHF, diabetes, fibromyalgia, hypertension, ischemic heart disease, liver disease, peripheral vascular disease, pressure ulcer, stroke, substance and tobacco use disorders, depression, anxiety disorder, PTSD, and schizophrenia. Residents in the county varied in obtaining preventive health screenings: residents 18+ got annual physical exams (76.1%) and annual dental exams (70.4%), while 52% of men and 37.5% of women 65+ completed all CDC recommended vaccinations and cancer screenings. Community resources to support healthy aging include six assisted living facilities, 474 primary care providers, two hospitals, one home health agency, five skilled nursing facilities, 37 community health centers, two adult day health centers, two senior centers, three public universities or community colleges, and five public libraries.

## NOTES

## TECHNICAL NOTES

\*For more information on data sources, measures, and methodology used in the 2025 Connecticut Healthy Aging Data Report see our technical documentation at ([healthyagingdatareports.org](http://healthyagingdatareports.org)). For most indicators, the community and state values are estimates derived from sample data. Thus, it is possible that some of the differences between state and community estimates may be due to chance associated with population sampling. We use the terms “Better” and “Worse” to highlight differences between community and state estimates that we are confident are not due to chance. We balance two goals. First, we aim to report data at very local levels because we believe change is often locally driven. Second, we vowed to protect the privacy of the people providing the information reported. Thus, given the constraints of the data analyzed, we used a hierarchical approach to reporting.
