

North Branford (New Haven)

North Branford is a town in New Haven County with 2,898 residents aged 65 and older. Compared to state average rates, older residents have a lower rate of schizophrenia. However, they have higher rates of congestive heart failure (CHF), high cholesterol, and hypertension. Older residents in New Haven County varied in obtaining preventive health screenings: residents 18 and older got annual physical exams (76.1%) and annual dental exams (70.4%), while 52% of men and 37.5% of women 65 and older completed all CDC recommended vaccinations and cancer screenings. Community resources to support healthy aging include one assisted living facility, two primary care providers, one skilled nursing facility, one senior center, and two public libraries.

POPULATION CHARACTERISTICS	Significantly different than state rate	Community estimate	State estimate

NOTES

TECHNICAL NOTES

*For more information on data sources, measures, and methodology used in the 2025 Connecticut Healthy Aging Data Report see our technical documentation at (healthyagingdatareports.org). For most indicators, the community and state values are estimates derived from sample data. Thus, it is possible that some of the differences between state and community estimates may be due to chance associated with population sampling. We use the terms “Better” and “Worse” to highlight differences between community and state estimates that we are confident are not due to chance. We balance two goals. First, we aim to report data at very local levels because we believe change is often locally driven. Second, we vowed to protect the privacy of the people providing the information reported. Thus, given the constraints of the data analyzed, we used a hierarchical approach to reporting.
