

## Amherst, Central Hancock, Ellsworth, Lamoine, Mariaville, Otis, Trenton, Waltham (Hancock)

The towns and cities of Amherst, Central Hancock, Ellsworth, Lamoine, Mariaville, Otis, Trenton, and Waltham are located in Hancock County. Collectively, these areas are home to 3,206 residents aged 65 and older. Compared to state average rates, older residents fare better on some healthy aging indicators with lower rates of congestive heart failure (CHF), diabetes, ischemic heart disease, peripheral vascular disease, and schizophrenia. However, they have a higher rate of glaucoma. Older residents in Hancock County varied in obtaining preventive health screenings: residents 18 and older got annual physical exams (78.4%) and annual dental exams (68.8%), while 49.7% of men and 42.5% of women 65 and older completed all CDC recommended vaccinations and cancer screenings. Community resources to support healthy aging include 28 primary care providers, one hospital, two skilled nursing facilities, two community health centers, one adult day health center, one senior center, one public university or community college, and one public library. Ellsworth is a designated AARP Age-Friendly Community.

### POPULATION CHARACTERISTICS

	Significantly different than state rate	Community estimate	State estimate
Total population (all ages)		14,584	1,366,949
Population 60 years or older as % of total population		30.2%	29.4%
Total population 60 years and older		4,408	402,170
Population 65 years or older as % of total population		22.0%	21.5%
Total population 65 years and older		3,206	293,488
% 65-74 years		62.0%	59.9%
% 75-84 years		26.8%	28.5%
% 85 years or older		11.2%	11.6%

% 65+ hospice users as % of decedents	47.2%	49.7%

NOTES

## TECHNICAL NOTES

\*For more information on data sources, measures, and methodology used in the 2025 Maine Healthy Aging Data Report see our technical documentation at ([healthyagingdatareports.org](https://healthyagingdatareports.org)). For most indicators, the community and state values are estimates derived from sample data. Thus, it is possible that some of the differences between state and community estimates may be due to chance associated with population sampling. We use the terms “Better” and “Worse” to highlight differences between community and state estimates that we are confident are not due to chance. We balance two goals. First, we aim to report data at very local levels because we believe change is often locally driven. Second, we vowed to protect the privacy of the people providing the information reported. Thus, given the constraints of the data analyzed, we used a hierarchical approach to reporting.
