

Farmington, New Sharon (Franklin)

The communities of Farmington and New Sharon are located in Franklin County. Collectively, these areas are home to 2,536 residents aged 65 and older. Compared to state average rates, older residents fare better on some healthy aging indicators with lower rates of high cholesterol, anemia, congestive heart failure (CHF), hypertension, and lung cancer. However, they have a higher rate of tobacco use disorder. Older residents in Franklin County varied in obtaining preventive health screenings: residents 18 and older got annual physical exams (77.2%) and annual dental exams (62.5%), while 52% of men and 40.6% of women 65 and older completed all CDC recommended vaccinations and cancer screenings. Community resources to support healthy aging include 18 primary care providers, one hospital, three skilled nursing facilities, one public university or community college, two public libraries, and one assisted living facility.

POPULATION CHARACTERISTICS

	Significantly different than state rate	Community estimate	State estimate
Total population (all ages)		9,262	1,366,949

NOTES

TECHNICAL NOTES

*For more information on data sources, measures, and methodology used in the 2025 Maine Healthy Aging Data Report see our technical documentation at (healthyagingdatareports.org). For most indicators, the community and state values are estimates derived from sample data. Thus, it is possible that some of the differences between state and community estimates may be due to chance associated with population sampling. We use the terms “Better” and “Worse” to highlight differences between community and state estimates that we are confident are not due to chance. We balance two goals. First, we aim to report data at very local levels because we believe change is often locally driven. Second, we vowed to protect the privacy of the people providing the information reported. Thus, given the constraints of the data analyzed, we used a hierarchical approach to reporting.
