

Monmouth (Kennebec)

Monmouth is a town in Kennebec County with 675 residents aged 65 and older. Compared to state average rates, older residents fare better on some healthy aging indicators with lower rates of high cholesterol, Alzheimer's disease or related dementias, anemia, benign prostatic hyperplasia, cataract, chronic obstructive pulmonary disease (COPD), glaucoma, heart attack, hypertension, osteoarthritis/rheumatoid arthritis, osteoporosis, and peripheral vascular disease. However, they have a higher rate of schizophrenia. Older residents in Kennebec County varied in obtaining preventive health screenings: residents 18 and older got annual physical exams (77.7%) and annual dental exams (67.3%), while 53.7% of men and 41% of women 65 and older completed all CDC recommended vaccinations and cancer screenings. Community resources to support healthy aging include one primary care provider, one community health center, and one public library.

POPULATION CHARACTERISTICS

	Significantly different than state rate	Community estimate	State estimate
Total population (all ages)		4,107	1,366,949
Population 60 years or older as % of total population		23.8%	29.4%
Total population 60 years and older		979	402,170
Population 65 years or older as % of total population		16.4%	21.5%
Total population 65 years and older		675	293,488
% 65-74 years	*	74.5%	59.9%
% 75-84 years		19.3%	28.5%
% 85 years or older		6.2%	11.6%

# skilled nursing facility stays/1000 persons 65+ years annually	*	15.8	43.3
# skilled nursing home Medicare beds/1000 persons 65+ years		0.0	20.0
% 65+ getting Medicaid long term services and supports	*	1.2%	2.1%
% 65+ hospice users		3.1%	3.0%
% 65+ hospice users as % of decedents		46.4%	49.7%

NOTES

TECHNICAL NOTES

*For more information on data sources, measures, and methodology used in the 2025 Maine Healthy Aging Data Report see our technical documentation at (healthyagingdatareports.org). For most indicators, the community and state values are estimates derived from sample data. Thus, it is possible that some of the differences between state and community estimates may be due to chance associated with population sampling. We use the terms “Better” and “Worse” to highlight differences between community and state estimates that we are confident are not due to chance. We balance two goals. First, we aim to report data at very local levels because we believe change is often locally driven. Second, we vowed to protect the privacy of the people providing the information reported. Thus, given the constraints of the data analyzed, we used a hierarchical approach to reporting.
