

Brunswick (Cumberland)

Brunswick is a town in Cumberland County with 4,828 residents aged 65 and older. Compared to state average rates, older residents fare better on some healthy aging indicators with lower rates of high cholesterol, anemia, chronic kidney disease, chronic obstructive pulmonary disease (COPD), colon cancer, congestive heart failure (CHF), diabetes, fibromyalgia/chronic pain/fatigue, heart attack, hypertension, and substance and tobacco use disorders. However, they have higher rates of cataract and osteoporosis. Older residents in Cumberland County varied in obtaining preventive health screenings: residents 18 and older got annual physical exams (77.5%) and annual dental exams (73.2%), while 54.5% of men and 43.5% of women 65 and older completed all CDC recommended vaccinations and cancer screenings. Community resources to support healthy aging include 23 primary care providers, one hospital, one home health agency, two skilled nursing facilities, one hospice agency, one adult day health center, one senior center, two public universities or community colleges, one public library, and two assisted living residences.

POPULATION CHARACTERISTICS

	Significantly different than state rate	Community estimate	State estimate
Total population (all ages)		21,691	1,366,949
Population 60 years or older as % of total population		29.3%	29.4%
Total population 60 years and older		6,356	402,170
Population 65 years or older as % of total population		22.3%	21.5%
Total population 65 years and older		4,828	293,488
% 65-74 years	*	52.2%	59.9%
% 75-84 years		34.5%	28.5%
% 85 years or older		13.3%	11.6%
% 65+ population who are female		58.9%	54.3%
% 85+ population who are female		61.0%	64.8%
Race and ethnicity of the population 65+			
% White		97.5%	96.6%
% African American		0.2%	0.3%
% Asian		0.7%	0.5%

NOTES

TECHNICAL NOTES

*For more information on data sources, measures, and methodology used in the 2025 Maine Healthy Aging Data Report see our technical documentation at (healthyagingdatareports.org). For most indicators, the community and state values are estimates derived from sample data. Thus, it is possible that some of the differences between state and community estimates may be due to chance associated with population sampling. We use the terms “Better” and “Worse” to highlight differences between community and state estimates that we are confident are not due to chance. We balance two goals. First, we aim to report data at very local levels because we believe change is often locally driven. Second, we vowed to protect the privacy of the people providing the information reported. Thus, given the constraints of the data analyzed, we used a hierarchical approach to reporting.
