

Cyr, Hamlin, Van Buren (Aroostook)

The communities of Cyr, Hamlin, and Van Buren are located in Aroostook County. Collectively, these areas are home to 747 residents aged 65 and older. Compared to state average rates, older residents fare worse on some healthy aging indicators with higher rates of high cholesterol, Alzheimer's disease or related dementias, anemia, asthma, benign prostatic hyperplasia, chronic obstructive pulmonary disease (COPD), colon cancer, congestive heart failure (CHF), diabetes, fibromyalgia/chronic pain/fatigue, heart attack, hypertension, ischemic heart disease, osteoporosis, tobacco use disorder, anxiety disorder, and schizophrenia. Older residents in Aroostook County varied in obtaining preventive health screenings: residents 18 and older got annual physical exams (81.1%) and annual dental exams (59.8%), while 43.1% of men and 36% of women 65 and older completed all CDC recommended vaccinations and cancer screenings. Community resources to support healthy aging include two primary care providers, one skilled nursing facility, two community health centers, and one public library.

POPULATION CHARACTERISTICS

	Significantly different than state rate	Community estimate	State estimate
Total population (all ages)		2,169	1,366,949
Population 60 years or older as % of total population		44.2%	29.4%
Total population 60 years and older		958	402,170
Population 65 years or older as % of total population		34.4%	21.5%
Total population 65 years and older		747	293,488
% 65-74 years		47.9%	59.9%
% 75-84 years		33.6%	28.5%
% 85 years or older		18.5%	11.6%
% 65+ population who are female		63.9%	54.3%
% 85+ population who are female		87.0%	64.8%
Race and ethnicity of the population 65+			
% White		100.0%	96.6%
% African American		0.0%	0.3%
% Asian		0.0%	0.5%
% Other race(s)		0.0%	2.5%
% Hispanic		0.5%	0.7%
# 55+ who are Native American / Alaskan		0	1,794

% 65+ hospice users	*	1.7%	3.0%
% 65+ hospice users as % of decedents	*	34.6%	49.7%

NOTES

TECHNICAL NOTES

*For more information on data sources, measures, and methodology used in the 2025 Maine Healthy Aging Data Report see our technical documentation at (healthyagingdatareports.org). For most indicators, the community and state values are estimates derived from sample data. Thus, it is possible that some of the differences between state and community estimates may be due to chance associated with population sampling. We use the terms “Better” and “Worse” to highlight differences between community and state estimates that we are confident are not due to chance. We balance two goals. First, we aim to report data at very local levels because we believe change is often locally driven. Second, we vowed to protect the privacy of the people providing the information reported. Thus, given the constraints of the data analyzed, we used a hierarchical approach to reporting.
