

Hanover (Grafton)

Hanover is a town in Grafton County with 1,902 residents aged 65 or older. Compared to state average rates, older residents have lower rates of high cholesterol, chronic kidney disease, chronic obstructive pulmonary disease (COPD), congestive heart failure (CHF), diabetes, heart attack, hypertension, ischemic heart disease, liver disease, lung cancer, peripheral vascular disease, and tobacco use disorder. However, they have higher rates of Alzheimer's disease or related dementias, cataract, fibromyalgia/chronic pain/fatigue, glaucoma, osteoarthritis/rheumatoid arthritis, and osteoporosis. Older residents in Grafton County vary in obtaining preventive health screenings: residents 18 and older got annual physical exams (70.4%) and annual dental exams (67.2%), while 48.6% of men and 42.7% of women 65 and older completed all CDC recommended vaccinations and cancer screenings. Community resources to support healthy aging include 14 primary care providers, one skilled nursing facility, one senior center, two public libraries, and one Osher Lifelong Learning Institute (OLLI).

POPULATION CHARACTERISTICS	Significantly different than state rate	Community estimate	State estimate
Total population (all ages)		11,205	1,379,610
Population 60 years or older as % of total population		21.5%	26.7%
Total population 60 years and older		2,407	368,151
Population 65 years or older as % of total population		17.0%	19.0%
Total population 65 years and older		1,902	261,749
% 65-74 years	*	43.1%	60.7%
% 75-84 years		32.0%	28.0%
% 85 years or older	*	24.9%	11.3%
% 65+ population who are female		55.0%	53.9%
% 85+ population who are female		59.1%	64.0%
Race and ethnicity of the population 65+			
% White		97.2%	95.7%
% African American		0.0%	0.6%
% Asian		1.5%	1.3%

% 65+ hospice users	*	1.9%	2.7%
% 65+ hospice users as % of decedents	*	34.1%	47.1%

NOTES

TECHNICAL NOTES

*For more information on data sources, measures, and methodology used in the 2025 New Hampshire Healthy Aging Data Report see our technical documentation at (healthyagingdatareports.org). For most indicators, the community and state values are estimates derived from sample data. Thus, it is possible that some of the differences between state and community estimates may be due to chance associated with population sampling. We use the terms “Better” and “Worse” to highlight differences between community and state estimates that we are confident are not due to chance. We balance two goals. First, we aim to report data at very local levels because we believe change is often locally driven. Second, we vowed to protect the privacy of the people providing the information reported. Thus, given the constraints of the data analyzed, we used a hierarchical approach to reporting.
