

Hopkinton (Merrimack)

Hopkinton is a town in Merrimack County with 1,003 residents aged 65 or older. Compared to state average rates, older residents fare better on some healthy aging indicators with lower rates of hip fracture, Alzheimer's disease or related dementias, anemia, chronic kidney disease, chronic obstructive pulmonary disease (COPD), congestive heart failure (CHF), diabetes, fibromyalgia/chronic pain/fatigue, heart attack, hypertension, ischemic heart disease, liver disease, migraine, osteoporosis, peripheral vascular disease, pressure ulcer, stroke, substance and tobacco use disorders, anxiety disorder, and schizophrenia. However, they have a higher rate of cataract. Older residents in Merrimack County vary in obtaining preventive health screenings: residents 18 and older got annual physical exams (73.2%) and annual dental exams (69.4%), while 52.5% of men and 46% of women 65 and older completed all CDC recommended vaccinations and cancer screenings. Community resources to support healthy aging include two primary care providers and one public library.

POPULATION CHARACTERISTICS	Significantly different than state rate	Community estimate	State estimate
Total population (all ages)		5,925	1,379,610
Population 60 years or older as % of total population		26.0%	26.7%
Total population 60 years and older		1,542	368,151
Population 65 years or older as % of total population		16.9%	19.0%
Total population 65 years and older		1,003	261,749
% 65-74 years	*	72.2%	60.7%
% 75-84 years		20.2%	28.0%
% 85 years or older		7.6%	11.3%
% 65+ population who are female		54.1%	53.9%
% 85+ population who are female		69.7%	64.0%
Race and ethnicity of the population 65+			
% White		100.0%	95.7%
% African American		0.0%	0.6%
% Asian		0.0%	1.3%
% Other race(s)		0.0%	2.3%
% Hispanic		0.0%	1.1%

% 65+ hospice users		2.5%	2.7%
% 65+ hospice users as % of decedents		45.8%	47.1%

NOTES

TECHNICAL NOTES

*For more information on data sources, measures, and methodology used in the 2025 New Hampshire Healthy Aging Data Report see our technical documentation at (healthyagingdatareports.org). For most indicators, the community and state values are estimates derived from sample data. Thus, it is possible that some of the differences between state and community estimates may be due to chance associated with population sampling. We use the terms “Better” and “Worse” to highlight differences between community and state estimates that we are confident are not due to chance. We balance two goals. First, we aim to report data at very local levels because we believe change is often locally driven. Second, we vowed to protect the privacy of the people providing the information reported. Thus, given the constraints of the data analyzed, we used a hierarchical approach to reporting.
