

## New Boston (Hillsborough)

New Boston is a town in Hillsborough County with 907 residents aged 65 or older. Compared to state average rates, older residents fare better on some healthy aging indicators with lower rates of Alzheimer's disease or related dementias, anemia, atrial fibrillation, cataract, congestive heart failure (CHF), glaucoma, heart attack, hypertension, liver disease, osteoporosis, peripheral vascular disease, pressure ulcer, depression, and anxiety disorder. However, they have higher rates of PTSD, and schizophrenia. Older residents in Hillsborough County vary in obtaining preventive health screenings: residents 18 and older got annual physical exams (72.8%) and annual dental exams (69.8%), while 47.8% of men and 38.3% of women 65 and older completed all CDC recommended vaccinations and cancer screenings. A community resource to support healthy aging is their public library.

## NOTES

## TECHNICAL NOTES

\*For more information on data sources, measures, and methodology used in the 2025 New Hampshire Healthy Aging Data Report see our technical documentation at ([healthyagingdatareports.org](http://healthyagingdatareports.org)). For most indicators, the community and state values are estimates derived from sample data. Thus, it is possible that some of the differences between state and community estimates may be due to chance associated with population sampling. We use the terms “Better” and “Worse” to highlight differences between community and state estimates that we are confident are not due to chance. We balance two goals. First, we aim to report data at very local levels because we believe change is often locally driven. Second, we vowed to protect the privacy of the people providing the information reported. Thus, given the constraints of the data analyzed, we used a hierarchical approach to reporting.
