

New London (Merrimack)

New London is a town in Merrimack County with 1,584 residents aged 65 or older. Compared to state average rates, older residents fare better on some healthy aging indicators with lower rates of chronic kidney disease, chronic obstructive pulmonary disease (COPD), congestive heart failure (CHF), diabetes, endometrial cancer, peripheral vascular disease, substance and tobacco use disorders, anxiety disorder, PTSD, and schizophrenia. However, they have higher rates of benign prostatic hyperplasia, breast cancer, cataract, osteoarthritis/rheumatoid arthritis, and osteoporosis. Older residents in Merrimack County vary in obtaining preventive health screenings: residents 18 and older got annual physical exams (73.2%) and annual dental exams (69.4%), while 52.5% of men and 46% of women 65 and older completed all CDC recommended vaccinations and cancer screenings. Community resources to support healthy aging include 17 primary care providers, one hospital, one home health agency, one assisted living facility, one hospice agency, one senior center, and one public library.

POPULATION CHARACTERISTICS	Significantly different than state rate	Community estimate	State estimate
Total population (all ages)		4,389	1,379,610
Population 60 years or older as % of total population		43.1%	26.7%
Total population 60 years and older		1,891	368,151
Population 65 years or older as % of total population		36.1%	19.0%
Total population 65 years and older		1,584	261,749
% 65-74 years	*	43.7%	60.7%
% 75-84 years		39.2%	28.0%
% 85 years or older		17.1%	11.3%
% 65+ population who are female		58.6%	53.9%
% 85+ population who are female		77.9%	64.0%
Race and ethnicity of the population 65+			
% White		99.1%	95.7%
% African American		0.2%	0.6%
% Asian		0.0%	1.3%
% Other race(s)		0.8%	2.3%
% Hispanic		0.0%	1.1%

% 65+ hospice users as % of decedents		43.9%	47.1%

NOTES

TECHNICAL NOTES

*For more information on data sources, measures, and methodology used in the 2025 New Hampshire Healthy Aging Data Report see our technical documentation at (healthyagingdatareports.org). For most indicators, the community and state values are estimates derived from sample data. Thus, it is possible that some of the differences between state and community estimates may be due to chance associated with population sampling. We use the terms “Better” and “Worse” to highlight differences between community and state estimates that we are confident are not due to chance. We balance two goals. First, we aim to report data at very local levels because we believe change is often locally driven. Second, we vowed to protect the privacy of the people providing the information reported. Thus, given the constraints of the data analyzed, we used a hierarchical approach to reporting.
